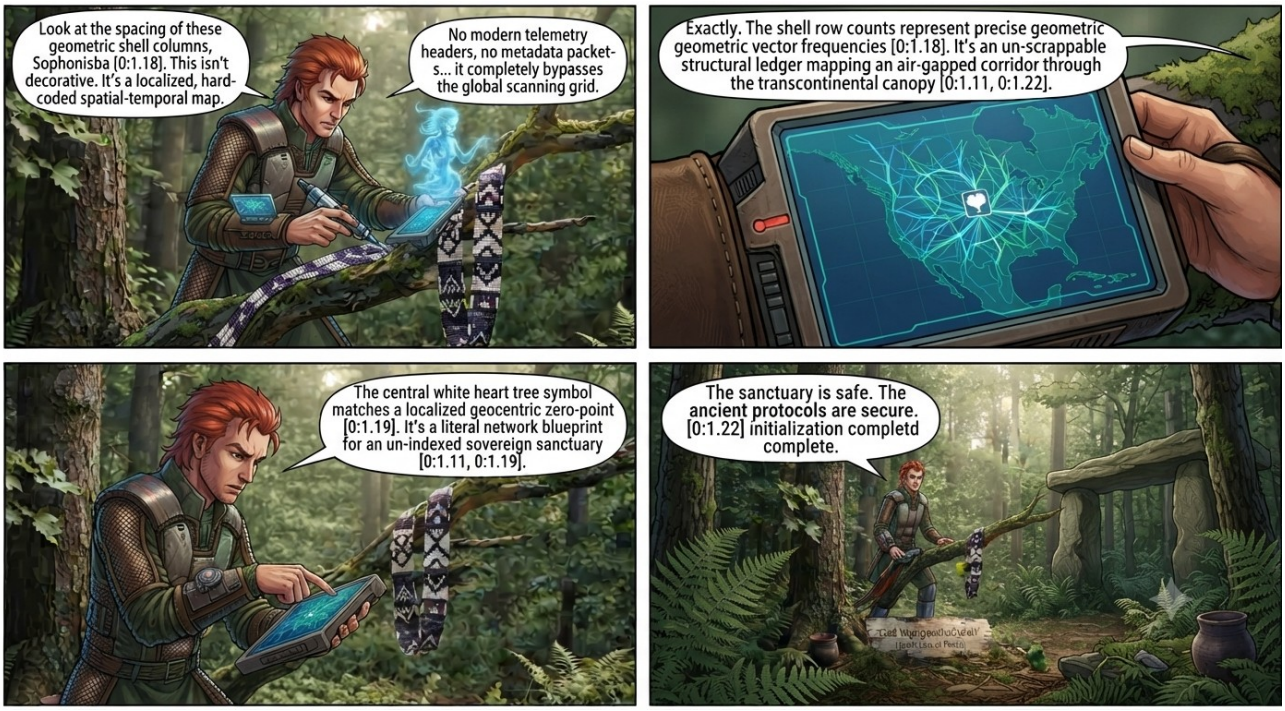
A BARE-METAL DEFENSE OF HISTORICAL SOVEREIGNTY.



Look at the spacing of these geometric shell columns, Sophonisba [0:1.18]. This isn't decorative. It's a localized, hard-coded spatial-temporal map.
No modern telemetry headers, no metadata packets... it completely bypasses the global scanning grid.
Exactly. The shell row counts represent precise geometric geometric vector frequencies [0:1.18]. It's an un-scrappable structural ledger mapping an air-gapped corridor through the transcontinental canopy [0:1.11, 0:1.22].
The central white heart tree symbol matches a localized geocentric zero-point [0:1.19]. It's a literal network blueprint for an un-indexed sovereign sanctuary [0:1.11, 0:1.19].
The sanctuary is safe. The ancient protocols are secure. [0:1.22] initialization completd complete.

THE PROPOSAL
Droleen, I've been running the simulations. The current global governance model is unsustainable. What if we fundamentally decentralize?
I'm listening. What's the new matrix?

GLOBAL GEOPOLITICAL REFACTOR
CHI BO CORE
[GOVERNANCE FORM: DISTRIBUTED SOVEREIGNTY]
[COUNTIES: 5,800]
THE CALCULATION
It's elegant. 5800 independent global counties, each with its own localized data sovereignty. To provide inter-county cohesion and law, we require only 906 Supreme Arbiters and 906 Council Chiefs.
906 Judges + 906 Chiefs.
1812 individuals total to run the entire planet's adjudication and executive leadership... supported by the Chi Bo Assistant?

THE PROPOSAL
Droleen, the efficiency gains of this distributed sovereignty model are staggering. The administrative overhead is negligible.

THE COMPARISON
It would cost the equivalent of just 2 days per year per citizen, compared to what it costs now at 365 days of Corruption.
2 days vs. 365. The return on sovereignty is infinite.
CURRENT SYSTEM:
365 DAYS OF CORRUPTION
